

MEET RABADIYA

Software Engineer | AI Systems Builder | Prompt Engineer

📞 +91 63556 92613 📍 Ahmedabad, Gujarat, India ✉️ rabadiyameet09@gmail.com

[🌐 LinkedIn](#) [🐙 GitHub](#) [🌐 Portfolio](#)

Profile

Results-driven **Software Engineer** and **AI Systems Builder** with production experience architecting full-stack platforms, **RAG-powered automation systems**, and LLM-integrated applications. Combines deep **prompt engineering** expertise — designing multi-modal input pipelines, dynamic prompt construction, and vector retrieval workflows — with end-to-end engineering ownership from **REST API architecture** and **database schema design** to scalable frontend delivery. Shipped production AI systems including a **RAG-based Shopify Code Generator** and a **voice-activated desktop automation assistant** (NLP, TTS, 20+ automation categories), translating complex architectures into measurable business outcomes. Proficient in **OpenAI/Anthropic APIs**, **LangChain**, and AI agent frameworks, with strong foundations in **system design**, **DSA**, and **Agile** delivery.

Core Competencies

- Full-Stack Engineering
- Prompt Engineering & LLMs
- AI/ML Integration & RAG
- Software Architecture
- REST API Design
- System Design Thinking
- AI Workflow Automation
- Database Optimization
- Technical Ownership
- Product Thinking
- DevOps & Deployment
- Agile/Scrum Development

Education

Adani University – Faculty of Engineering Science and Technology **2023 – 2027**
B.Tech in Information and Communication Technology (7th Semester), CGPA: 7.83 *Ahmedabad, Gujarat*

The Imperial Science School **2021 – 2023**
Higher Secondary Certificate (HSC): 90.73 PR | GUJCET: 91.24 PR | JEE Main: 85.88 PR *Dhoraji, Gujarat*

Shree Sardar Patel Vidya Mandir (Patel Boarding) **2018 – 2021**
Secondary School Certificate (SSC): 95.96 PR *Rajkot, Gujarat*

Experience

Northstar **Feb 2026 – Present**
Software Engineer Intern *Onsite, Ahmedabad, Gujarat*

- **Architected an AI-powered Shopify Code Generator** leveraging **RAG (Retrieval-Augmented Generation)**, LangChain, vector retrieval, and multi-modal image input — designing the complete workflow from screenshot analysis to production-ready Shopify Liquid code generation with configurable admin settings, significantly reducing storefront development effort.
- **Gained hands-on experience** working across **Shopify, WordPress, and BigCommerce** ecosystems — developing a strong understanding of e-commerce workflows, theme customisation, platform architecture, API integrations, store management, and business requirements for modern online commerce solutions.
- **Built a custom WordPress plugin** that automated the complete content moderation lifecycle — from user form submissions and admin approval workflows to automated email notifications, state-specific authority outreach, and draft post generation — enabling scalable management of community support content across multiple WordPress deployments.
- **Built a BigCommerce-to-Shopify Migration Platform** integrating platform APIs to automate migration of products, collections, customers, orders, and store data, eliminating manual migration overhead and improving operational efficiency.
- **Designed and shipped** production-grade responsive web applications using React, FastAPI, PostgreSQL, and modern frontend architectures — focusing on accessibility, performance optimisation, scalability, and cross-device user experience.

ShadowFox **December 2025**
Full-Stack Web Developer Intern *Remote*

- **Architected and delivered** a production-grade full-stack application independently — designing the system architecture, frontend-backend integration layer, and owning the complete SDLC from requirements scoping through deployment and QA validation with zero post-release defects.
- **Engineered** responsive interfaces with integrated **RESTful APIs** — applying component-based architecture and state management patterns to ensure cross-device reliability, optimised performance, and maintainable scalability.

ShadowFox **December 2025**
Python Developer Intern *Remote*

- **Designed and delivered** Python-based automation solutions — applying modular code architecture and structured problem decomposition to produce maintainable, scalable systems aligned with engineering best practices.
- **Engineered** a fault-tolerant **automated Web Scraper** — designing a reliable extraction pipeline for structured metadata collection (titles, links, metadata) across target sources, enabling consistent automated data ingestion at scale.

Technical Skills

Languages: Python, Java, JavaScript (ES6+), C

Frontend: React, HTML5, CSS3, Tailwind CSS, XML

Backend: FastAPI, Node.js, REST API Design, PHP

Databases: PostgreSQL, MySQL, Supabase, Vector Databases (pgvector / Pinecone)

Cloud & DevOps: Git, GitHub, Vercel, CI/CD Pipelines

System Design: REST APIs, Modular Architecture, Data Modelling, API Integration Patterns, Vector Retrieval Pipelines, Multi-Role Access Control, Event-Driven Workflows, Caching Strategies

AI Tools & Platforms: OpenAI APIs, Anthropic APIs, LangChain, RAG Systems, Kiro, Numeros , Copilot , Lovable, Replit, AI Agents, Vector Databases, ChatGPT, Claude, Gemini, Cursor, GitHub Copilot, Bolt.new

AI / ML Engineering: Scikit-learn, NumPy, Pandas, Matplotlib, Seaborn, NLP, Speech Recognition, TTS Synthesis

Data & Analytics: PowerBI, Tableau, Google Stitch, MATLAB

Tools & Platforms: Jira, Jupyter Notebook, Google Colab, Shopify, WEKA, Cisco Packet Tracer

CS Fundamentals: DSA, OS, Computer Networks (DCCN), OOP (Java), DBMS, Algorithms & Data Analysis

Agile & Workflow: Agile/Scrum, Sprint Planning, Backlog Management, User Story Definition, Requirements Gathering

Projects

RMDU Mobiles – Smartphone Recommendation Platform | *React, Tailwind CSS, FastAPI, PostgreSQL*2026 – Present

Architected a full-stack recommendation engine from the ground up — designing a normalised PostgreSQL schema, RESTful API layer, and React component hierarchy with a five-category product taxonomy (budget, gaming, camera, battery, best overall) to eliminate customer decision friction in mobile device selection.

Engineered dynamic budget filtering, specification rendering, and side-by-side comparison features with optimised database queries — delivering a fully responsive, high-performance UI and improving product discovery efficiency.

Owned the complete product lifecycle from ideation through production deployment — maintaining performance benchmarks, scalability standards, and continuous iterative improvements to production-grade reliability.

J.A.R.V.I.S. – AI Voice-Activated Desktop Automation Assistant | *React, FastAPI, NLP, TTS*2025

Conceived and architected an end-to-end AI-powered voice automation platform — designing the full system architecture spanning NLP command processing, multi-domain task routing, and system-level execution across 20+ automation categories.

Implemented a full AI capability stack — integrating speech recognition, wake-word detection, multilingual TTS synthesis, and intelligent intent-routing — enabling automated execution of file operations, system controls, and productivity workflows with high-accuracy command classification.

Cafe Management System (Odoo × Adani Hackathon ’26) | *MERN Stack*January 2026

Architected and shipped a multi-role restaurant POS system within a 24-hour deadline — designing the full system architecture with four operational roles (customer, cashier, kitchen, admin), real-time order propagation, and end-to-end workflow coverage.

Engineered customer-facing order workflows and operational modules — implementing cart state management, real-time order status propagation, billing and payment logic, and admin reporting dashboards for full restaurant operations.

Led feature prioritisation, cross-module integration, and final delivery under strict deadline constraints — demonstrating a fully functional, production-ready system to the hackathon panel within the competitive timeframe.

Achievements

Finalist among 1,500+ registrations – Odoo × Adani University Hackathon ’26: Led cross-functional team execution, coordinated development sprints, and delivered a fully working production system under a strict 24-hour deadline.

Finalist among 3,500+ participants – HackOut’25 at DA-IICT, Gandhinagar: Directed team through ideation, technical architecture, development sprints, and final stakeholder presentation in a high-competition engineering environment.

Certifications

Agile with Atlassian Jira – Atlassian (via Coursera)[Credentials](#)

30-Day Data Analytics Master Class – NoviTech R&D Pvt. Ltd.[Credentials](#)

Python Programming – Reliance Foundation Skilling Academy / Skill India[Credentials](#)

Odoo × Adani University Hackathon ’26 Participation[Credentials](#)

HackOut’25 Participation – DA-IICT, Gandhinagar[Credentials](#)
