Profile

Results-driven **Software Engineer** with hands-on experience architecting and delivering scalable full-stack systems, AI-powered automation platforms, and production-grade web applications. Demonstrated ability to design end-to-end solutions — from **REST API architecture** and **database schema design** to responsive frontend delivery — with a consistent focus on **performance**, **reliability**, and **engineering best practices**. Shipped production AI systems including a **RAG-based Shopify Code Generator** and a **voice-activated desktop automation assistant**, translating complex technical architectures into measurable business outcomes. Strong foundation in **data structures**, **algorithms**, and **system design thinking**, with applied experience in **Agile** workflows, cross-functional engineering collaboration, and ownership-driven full product lifecycle delivery.

Education

Adani University – Faculty of Engineering Science and Technology

2023 – 2027

B.Tech in Information and Communication Technology (7th Semester), CGPA: 7.83

Ahmedabad, Gujarat

The Imperial Science School

2021 – 2023

Higher Secondary Certificate (HSC): 90.73 PR

Dhoraji, Gujarat

- GUJCET: 91.24 PR

- JEE Main: 85.88 PR

Shree Sardar Patel Vidya Mandir (Patel Boarding)

2018 – 2021

Secondary School Certificate (SSC - 10th), 95.96 PR

Rajkot, Gujarat

Internships

Northstar

Feb 2026 – Present

Software Engineer Intern

Onsite, Ahmedabad, Gujarat

- **Architected** an **AI-powered Shopify Code Generator** leveraging **RAG (Retrieval-Augmented Generation)**, LangChain, vector retrieval, and multi-modal image input — designing the complete workflow from screenshot analysis to production-ready Shopify Liquid code generation with configurable admin settings, significantly reducing storefront development effort.
- **Gained hands-on experience** working across **Shopify, WordPress, and BigCommerce** ecosystems — developing a strong understanding of e-commerce workflows, theme customisation, platform architecture, API integrations, store management, and business requirements for modern online commerce solutions.
- **Built** a custom **WordPress plugin** that automated the complete content moderation lifecycle — from user form submissions and admin approval workflows to automated email notifications, state-specific authority outreach, and draft post generation — enabling scalable management of community support content across multiple WordPress deployments.
- **Built** a **BigCommerce-to-Shopify Migration Platform** integrating platform APIs to automate migration of products, collections, customers, orders, and store data, eliminating manual migration overhead and improving operational efficiency.
- **Designed and shipped** production-grade responsive web applications using React, FastAPI, PostgreSQL, and modern frontend architectures — focusing on accessibility, performance optimisation, scalability, and cross-device user experience.

ShadowFox

December 2025

Full-Stack Web Developer Intern

Remote

- **Independently architected and delivered** a production-grade full-stack web application — defining system requirements, designing the frontend-backend integration layer, and managing the complete SDLC from scoping through deployment and QA validation.
- **Engineered** responsive, accessible frontend interfaces with integrated **RESTful backend APIs** — applying component-based architecture, state management patterns, and Agile development discipline to ensure cross-device reliability, optimised performance, and maintainable scalability.

ShadowFox

December 2025

Python Developer Intern

Remote

- **Designed and delivered** multiple Python-based software solutions independently — applying structured **problem decomposition**, modular code architecture, and iterative development practices aligned with engineering best practices.
- **Engineered** a scalable **Web Scraper** for automated structured data extraction — designing the data schema, implementing fault-tolerant extraction logic for titles, links, and metadata across target sources, and ensuring reliable data pipeline operation.

Technical Skills

Programming Languages: Python, Java, C
Frontend Engineering: HTML5, CSS3, JavaScript (ES6+), React, Tailwind CSS, XML
Backend Engineering: FastAPI, REST API Design, PHP
Databases: MySQL, PostgreSQL, Supabase
AI & Machine Learning: RAG (Retrieval-Augmented Generation), Scikit-learn, NumPy, Pandas, Matplotlib, Seaborn
System Design: REST APIs, Modular Architecture, Component-Based Design, Data Modelling, API Integration Patterns
DevOps & Deployment: Git, GitHub, Vercel
Data & Analytics: PowerBI, MATLAB
Tools & Platforms: Jira, Jupyter Notebook, Google Colab, Wordpress, Cisco Packet Tracer, AutoCAD, Shopify, Google Stitch
CS Fundamentals: DSA, Algorithms & Data Analysis (ADA), OS, Computer Networks (DCCN), OOP (Java), DBMS, ML
Agile & Workflow: Agile/Scrum, Sprint Planning, Backlog Management, User Story Definition, Requirements Gathering
Soft Skills: Engineering Problem-Solving, Technical Ownership, Agile Learning, Cross-functional Collaboration, Adaptability, Time Management, Team Leadership

Projects

RMDU Mobiles – Smartphone Recommendation Platform | *React, Tailwind CSS, FastAPI, PostgreSQL* **2026 – Present**

- **Architected** a full-stack smartphone recommendation platform from the ground up — designing the system data model, RESTful API layer, and React component hierarchy to eliminate customer decision complexity in mobile device selection.
- **Engineered** a scalable React/FastAPI/PostgreSQL application with a five-category product taxonomy (budget, gaming, camera, battery, best overall) — implementing dynamic budget filtering, specification rendering, and side-by-side comparison with optimised database queries and a fully responsive UI.
- **Designed** the complete UX architecture independently — defining information hierarchy, navigation patterns, and interaction flows to reduce user decision friction and improve purchase conversion.
- **Managed** the full product lifecycle from ideation through production deployment — maintaining performance benchmarks, scalability standards, and continuous iterative improvements.

Cafe Management System (Odoo × Adani Hackathon '26) | *MERN Stack* **January 2026**

- **Architected and delivered** a multi-role restaurant POS system within a 24-hour deadline — designing the full system architecture including user role segregation (customer, cashier, kitchen, admin), data flow modelling, and feature scope for a unified digital operations platform.
- **Engineered** customer-facing order management workflows — implementing table selection, menu browsing with cart state management, order placement, and real-time order tracking to optimise restaurant throughput and user experience.
- **Built** cashier, kitchen, and admin operational modules — including billing and payment processing logic, live order status propagation, menu management, and reporting dashboards to support end-to-end restaurant operations.
- **Led** feature prioritisation, integration, and final delivery under strict deadline constraints — successfully demonstrating a production-ready, fully functional product within the competitive hackathon timeframe.

J.A.R.V.I.S. – AI Voice-Activated Desktop Automation Assistant | *React, Tailwind CSS, FastAPI* **2025**

- **Conceived and architected** J.A.R.V.I.S., an AI-powered voice-activated desktop automation platform — designing the end-to-end system architecture spanning NLP command processing, multi-domain task routing, and system-level execution across **20+ automation categories**.
- **Engineered** a centralised React/FastAPI management dashboard as the system control plane — defining the information architecture and real-time API communication layer to provide system visibility, configuration management, and operational control.
- **Implemented** a full AI capability stack — integrating speech recognition, wake-word detection, TTS synthesis, multilingual NLP, and intelligent command routing — enabling automated execution of file operations, system controls, and productivity tasks with high-accuracy intent classification.

Achievements

- Finalist among **1,500+ registrations** in **Odoo × Adani University Hackathon '26** — led cross-functional team execution, coordinated development sprints, and delivered a fully working production system under a strict 24-hour deadline.
- Finalist among **3,500+ participants** in **HackOut'25** at DA-IICT, Gandhinagar — directed the team through ideation, technical solution design, development sprints, and final stakeholder presentation in a competitive engineering environment.

Certifications

- **Agile with Atlassian Jira** – Atlassian (via Coursera) [Credentials](#)
- **30-Day Data Analytics Master Class** – NoviTech R&D Pvt. Ltd. [Credentials](#)
- **Python Programming** – Reliance Foundation Skilling Academy / Skill India [Credentials](#)
- **Odoo × Adani University Hackathon '26 Participation** [Credentials](#)
- **HackOut'25 Participation** – DA-IICT, Gandhinagar [Credentials](#)
